

SPECIFICATION AMENDMENTS

Please amend the paragraph/section beginning on page 12, line 4, as follows:

In **Fig. 9**, a perspective view of the present invention secured to a golf cart having a roof is shown. The golf cart has two golf cart support bars **17**, a golf bag support bar **18** and a storage area **19**. The golf cart club bag protection device is designed so as the legs **21** of the non-movable securing frame ~~[[21]]~~ **1** are permanently vertical and flush against the golf cart roof support bars **17** at all times when the C-shaped clamps **6** are secured to the golf support bar **18**. Thus, there is no need to secure the golf cart club bag protection device to the roof of the golf cart or, in fact, make any alterations whatsoever to the golf cart as is the case with patented inventions in the prior art.
